COMPUTER ENGINEERING DEPARTMENT

B.E.3RD YEAR 6TH SEM

Subject Name: Advanced Java Programming

Subject Code: 3160707

INDEX

Sr. No.	AIM	DATE	SIGN
1	Write a JAVA program that implements a simple Client / Server application. The client sends data to a server. Server receives the data, uses it to produce a result and then sends the result back to client. The client displays the result on the console. For example the data send from the client is two numbers and the result produce by the server is addition of those two numbers.		
2	Write a JAVA program that implements a simple Client / Server application. The data send from the client is a number and the result produce by the server is even number or odd number		
3	Write a JAVA program that implements TCP/UDP chat application.		
4	Write a program that takes host name and output its IP Address.		
5	Write a Servlet that takes first name and last name from user & generate login id such that first three characters are from first name & last three characters are from the last name.		
6	Implements a Servlet which counts the number of Hits. (i.e. Hit-counter)		
7	Write a HTML page which inputs the below mentioned fields and invoke the java Servlet program which enters the fields in access Database. 1. EMP_ID, 2. EMP_NAME, 3. DEPT, 4.CITY.		
8	Write a HTML page which inputs the below mentioned fields and invoke the java Servlet program which enters the fields in access Database using prepared statement. 1. ENROLMENT, 2.STUDENT_NAME, 3. BRANCH, 4. YEAR.		
9	Write a HTML page that will ask user to login. When user submits this HTML pages, invoke a JSP on Server, which will make query in database to check whether username or password are correct or not. If the user is valid, create one Session for this user & provide one link in JSP1, that if click will execute JSP2 on server. In JSP2 print the content of session that was created in JSP1.		
10	To Study and implement JSF. (JAVA Server Faces)		
11	Create a web service using Netbeans IDE.		
12	To Study and implement Hibernate.		
13	Open Ended Problem: For Example: Develop an application of Online Pizza Shop through which user can make search of place by different area like shop name, area name, rating wise, etc. Make assumptions in application design. (Develop using JSP / Servlet)		

PRACTICAL-1

AIM: Write a java program that implements a simple client-server application.

The client send a data to server, Server receives data and produce a result back to client. The client display result on the console. For Example, the data send from the client is two numbers and the result produce by server is addition of those two number.

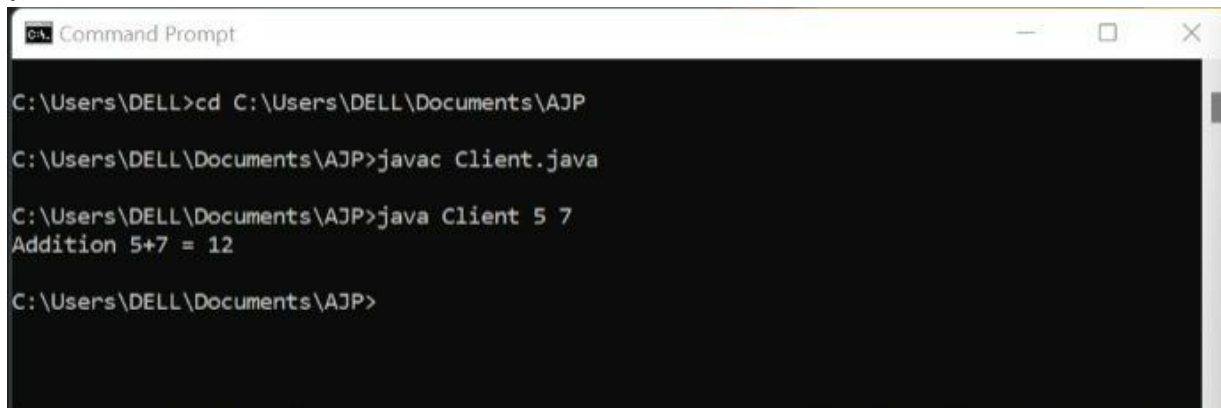

PROGRAM:

Client.java

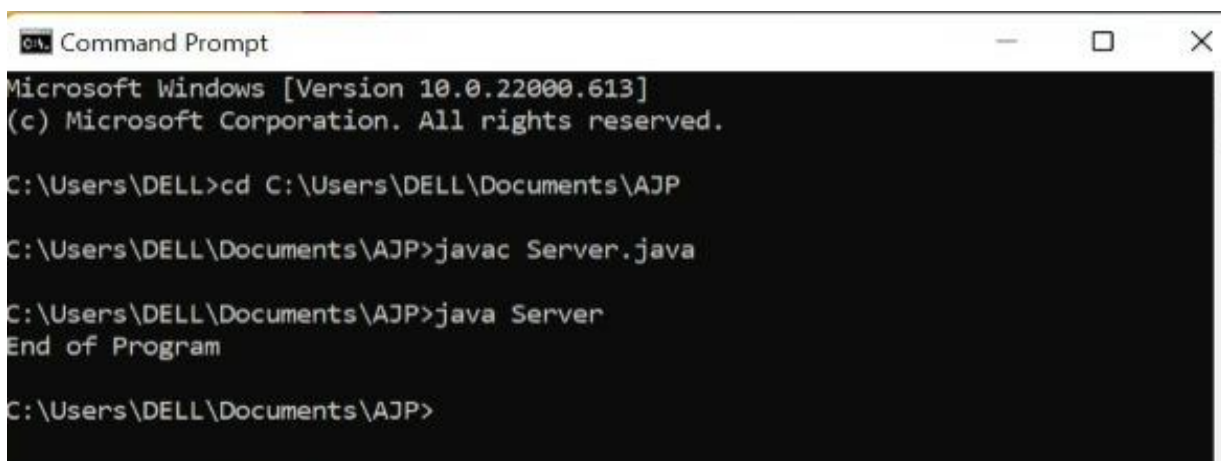

```
import java.io.*;
import java.net.*;
public class Client
{
    public static void main(String r[]) throws Exception
    {
        int a,b,sum;
        Socket s = new Socket("localhost",80);
        DataInputStream i = new DataInputStream(s.getInputStream());
        DataOutputStream o = new DataOutputStream(s.getOutputStream());
        a= Integer.parseInt(r[0]);
        b=Integer.parseInt(r[1]);
        o.write(a);
        o.write(b);
        sum=i.read();
        System.out.println("Addition " +a+" "+"b+" = "+sum);
        i.close();
        o.close();
        s.close();
    }
}
```

Server.java

```
import java.io.*;
import java.net.*;
public class Server
{
    public static void main(String r[]) throws Exception
    {
        ServerSocket s1 = new ServerSocket(80);
        Socket s = s1.accept();
        DataInputStream i = new DataInputStream(s.getInputStream());
        DataOutputStream o = new DataOutputStream(s.getOutputStream());
        int a= i.read();
        int b= i.read();
        int sum=a+b;
        o.write(sum);
        System.out.println("Endof Program");
        i.close();
        o.close();
        s1.close();
    }
}
```

A screenshot of a Windows Command Prompt window. The title bar reads "C:\ Command Prompt". The command history shows the user navigating to the directory "C:\Users\DELL\Documents\AJP" and then running "javac Client.java". The next command is "java Client 5 7", which produces the output "Addition 5+7 = 12". The prompt is currently at "C:\Users\DELL\Documents\AJP>".

A screenshot of a Windows Command Prompt window. The title bar reads "C:\ Command Prompt". The command history shows the user navigating to the directory "C:\Users\DELL\Documents\AJP" and then running "javac Server.java". The next command is "java Server", which produces the output "End of Program". The prompt is currently at "C:\Users\DELL\Documents\AJP>".

PRACTICAL – 2

AIM: Write a java program that implements a simple client-server application.

The data send from a client is a number and the result produce by the server is whether the number is even or odd.

PROGRAM:

Client.java

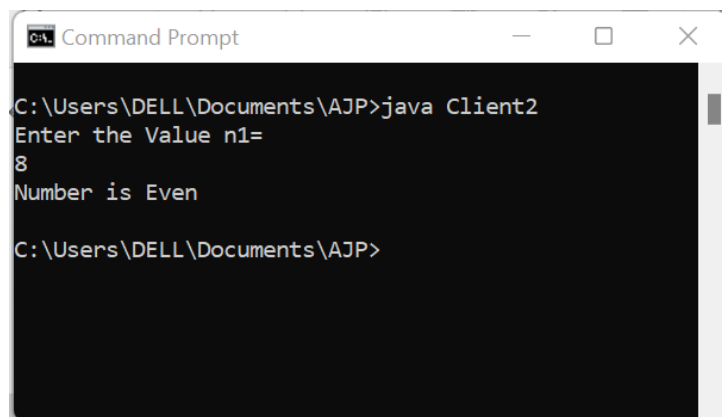

```
import java.io.*;
import java.net.*;
public class Client
{
    public static void main(String r[]) throws Exception
    {
        int a,b,sum;
        Socket s = new Socket("localhost",80);
        BufferedReader br = new BufferedReader(new InputStreamReader(System.in));
        DataInputStream i = new DataInputStream(s.getInputStream());
        DataOutputStream o = new DataOutputStream(s.getOutputStream());
        int n1;
        System.out.println("Enter the Value n1=");
        n1=Integer.parseInt(br.readLine());
        o.write(n1);
        System.out.println(i.readUTF());
        i.close();
        o.close();
        s.close();
    }
}
```

Server.java

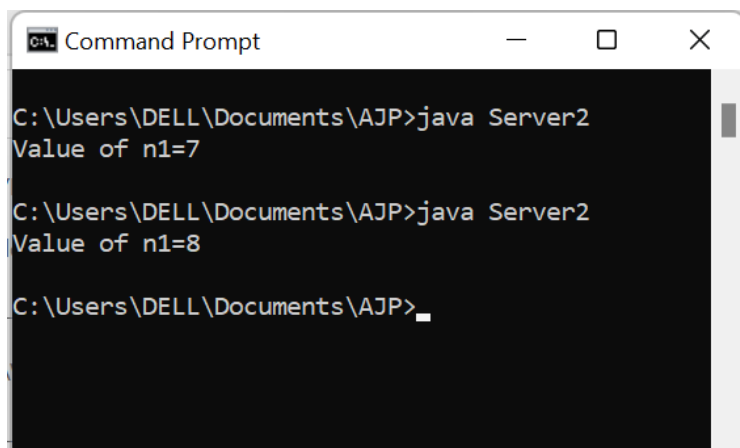

```
import java.io.*;
import java.net.*;
public class Server
{
    public static void main(String r[]) throws Exception
    {
        ServerSocket s1 = new ServerSocket(80);
        Socket s = s1.accept();
```

```
        DataInputStream i = new DataInputStream(s.getInputStream());
        DataOutputStream o = new DataOutputStream(s.getOutputStream());
        int n1=i.read();
        System.out.println("Value of n1="+n1);
        if(n1%2==0)
        {
            o.writeUTF("Number is Even");
        }
        else
        {
            o.writeUTF("Number is Odd");
        }

        i.close();
        o.close();
        s1.close();
    }
}
```

```
C:\Users\DELL\Documents\AJP>java Client2
Enter the Value n1=
8
Number is Even
C:\Users\DELL\Documents\AJP>
```

```
C:\Users\DELL\Documents\AJP>java Server2
Value of n1=7

C:\Users\DELL\Documents\AJP>java Server2
Value of n1=8

C:\Users\DELL\Documents\AJP>
```

PRACTICAL – 3

AIM: Write a java program that implements a TCP/UDP chat application.

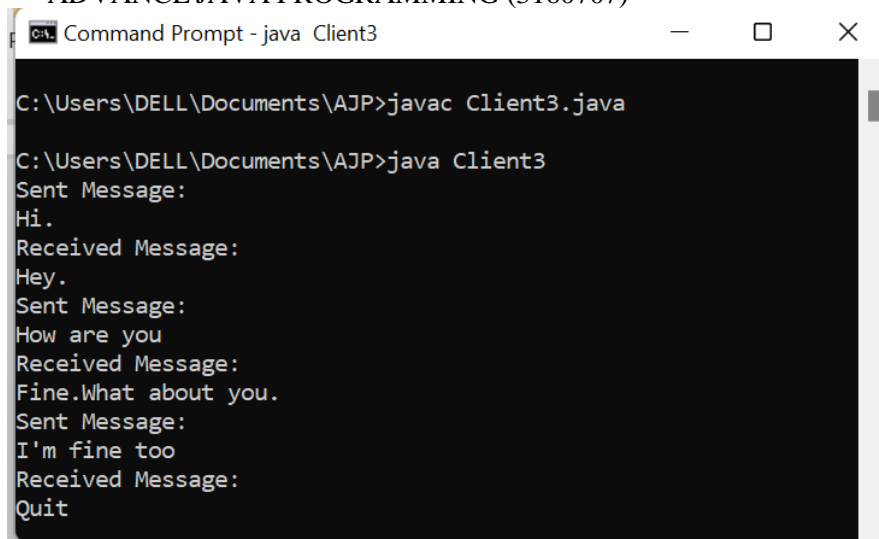

PROGRAM:

Client.java

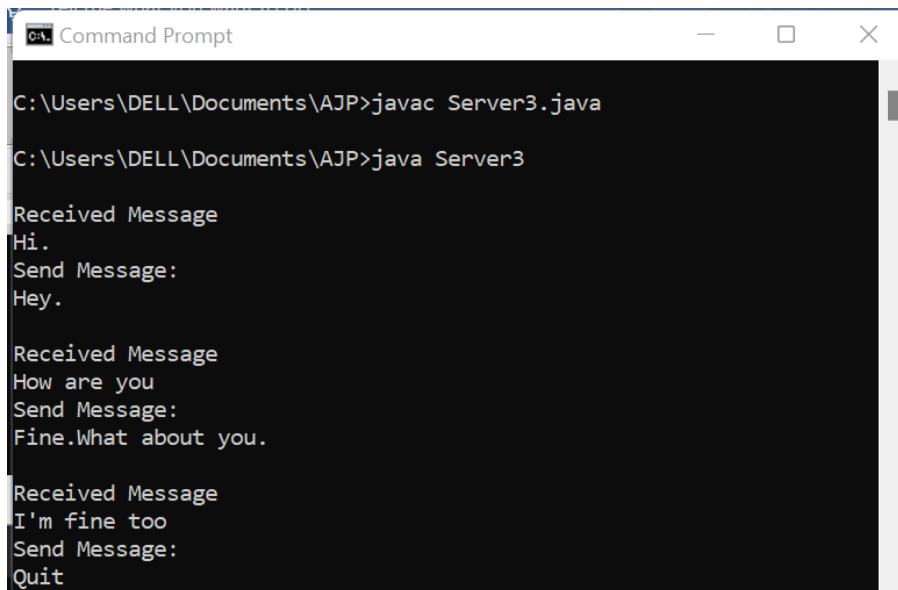

```
import java.io.*;
import java.net.*;
public class Client
{
    public static void main(String r[]) throws Exception
    {
        Socket s = new Socket("localhost",80);
        BufferedReader br = new BufferedReader(new InputStreamReader(System.in));
        DataInputStream i = new DataInputStream(s.getInputStream());
        DataOutputStream o = new DataOutputStream(s.getOutputStream());
        String p;
        do
        {
            System.out.println("Sent Message:");
            p=br.readLine();
            o.writeUTF(p);
            if(p.equalsIgnoreCase("Quit"))
            {
                break;
            }
            System.out.println("Received Message:");
            System.out.println(i.readUTF());
        }while(true);
        i.close();
        o.close();
        s.close();
    }
}
```

Server.java

```
import java.io.*;
import java.net.*;
public class Server
{
    public static void main(String r[]) throws Exception
    {
        ServerSocket s1 = new ServerSocket(80);
        Socket s = s1.accept();
        BufferedReader br = new BufferedReader(new InputStreamReader(System.in));
        DataInputStream i = new DataInputStream(s.getInputStream());
        DataOutputStream o = new DataOutputStream(s.getOutputStream());
        String q;
        do
        {
            System.out.println("\nReceived  Message");
            System.out.println(i.readUTF());
            System.out.println("Send Message:");
            q=br.readLine();
            o.writeUTF(q);
            if(q.equalsIgnoreCase("Quit"))
            {
                break;
            }
        }while(true);
        i.close();
        o.close();
        s1.close();
    }
}
```

```
C:\Users\DELL\Documents\AJP>javac Client3.java
C:\Users\DELL\Documents\AJP>java Client3
Sent Message:
Hi.
Received Message:
Hey.
Sent Message:
How are you
Received Message:
Fine.What about you.
Sent Message:
I'm fine too
Received Message:
Quit
```

```
C:\Users\DELL\Documents\AJP>javac Server3.java
C:\Users\DELL\Documents\AJP>java Server3
Received Message
Hi.
Send Message:
Hey.

Received Message
How are you
Send Message:
Fine.What about you.

Received Message
I'm fine too
Send Message:
Quit
```

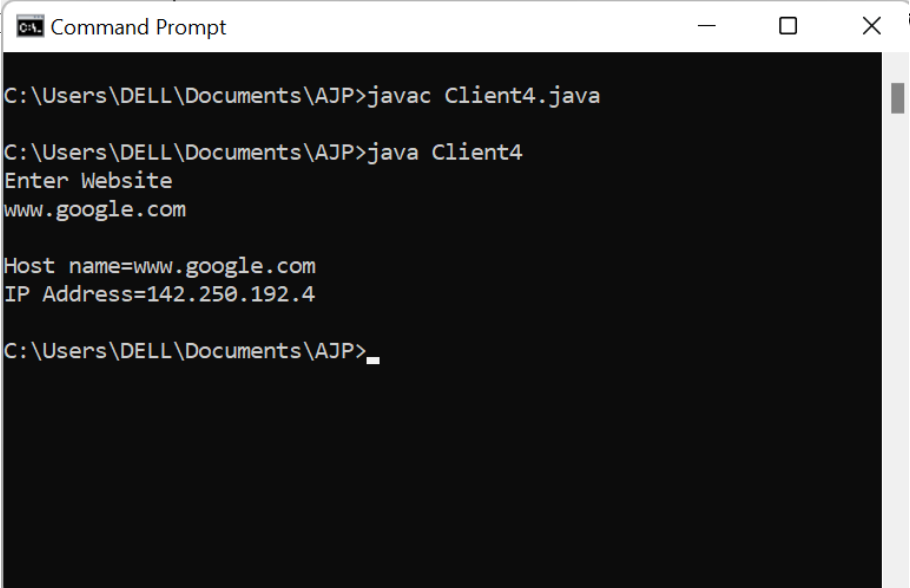

PRACTICAL-4

AIM: Write a java program that takes host name and outputs it's IP address.

PROGRAM:

```
import java.io.*;
import java.net.*;
class Client
{
    public static void main(String r[])
    {
        try
        {
            BufferedReader br = new BufferedReader(new InputStreamReader
            (System.in));
            System.out.println("Enter Website");
            String p = br.readLine();
            InetAddress ip = InetAddress.getByName(p);
            System.out.println("\nHost name=" + ip.getHostName());
            System.out.println("IP Address=" + ip.getHostAddress());
        }

        catch(Exception e)
        {
            System.out.println("Error="+e);
        }
    }
}
```

A screenshot of a Windows Command Prompt window. The title bar reads "Command Prompt" with standard window controls on the right. The command prompt shows the following sequence of commands and output:

```
C:\Users\DELL\Documents\AJP>javac Client4.java

C:\Users\DELL\Documents\AJP>java Client4
Enter Website
www.google.com

Host name=www.google.com
IP Address=142.250.192.4

C:\Users\DELL\Documents\AJP>
```

PRACTICAL-5

AIM: Write a servlet that takes first name and last name from user and generate login Id such that 3 characters are from first name and 3 characters are from last name.

PROGRAM:

index.html

```

    </session-config>
</web-app>

```

PRACTICAL –9

Aim: Write a HTML page that will ask user to login. When user submits this HTML pages, invoke a JSP on Server, which will make query in database to check whether username or password are correct or not. If the user is valid, create one Session for this user & provide one link in JSP1, that if click will execute JSP2 on server. In JSP2 print the content of session that was created in JSP1.

PROGRAM:

index.html

```
<html>
  <head>
    <title>Practical9</title>
    <meta charset="UTF-8">
    <metaname="viewport" content="width=device-width">
  </head>
  <body>
    <form action="login.jsp" method="get">
      User Name:<input type="text" name="user"/>
      Password:<input type="password" name="pw"/>
      <input type="submit" value="submit"/>
    </form>
  </body>
</html>
```

login.jsp

```
<% @page import="java.io.PrintWriter"%>

<% @pagelanguage="java" import="java.sql.*;"%>
<% @pagecontentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
  <head>
    <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
    <title>JSP Page</title>
  </head>
  <body>
```

```

        <%
            PrintWriter pw=response.getWriter();
            String uname = request.getParameter("user");
            String passw = request.getParameter("pw");

try
{
    Class.forName("sun.jdbc.odbc.JdbcOdbcDriver");
    Connectioncon=DriverManager.getConnection("jdbc:odbc:DATABASE1","", "");
    Statement st = con.createStatement();
    String QRY="SELECT * FROM tb1 WHERE username='" + uname + "' AND
password='" + passw + "'";
    ResultSet rs = st.executeQuery(QRY);
    while (rs.next()) {
        HttpSession hs = request.getSession(true);
        hs.setAttribute("username", uname);
    }
}

catch(Exception e)
{
    pw.println(e);
}
%>
<jsp:forward page="jsp1.jsp" />
</body>
</html>

```

jsp1.jsp

```

<% @page import="java.io.PrintWriter"%>
<% @pagecontentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>

            pw.println("<br /><b>Your Session ID is </b>" + hs.getId() + "<br>");
        %>
    </body>
</html>
```

PRACTICAL –10

Aim: To Study and implement JSF. (JAVA Server Faces)

PROGRAM:

index.xhtml

```
<html xmlns="http://www.w3.org/1999/xhtml"
      xmlns:h="http://xmlns.jcp.org/jsf/html">
<h:head>
<title>JSFDemo</title>
</h:head>
<h:body>
<h:form id="form">
<h:outputLabel>FirstName : </h:outputLabel>
<h:inputText id="fname" value="#{user.fname}" required="true"/><br/><br/>
<h:outputLabel>LastName : </h:outputLabel>
<h:inputText id="lname" value="#{user.lname}" required="true"/><br/><br/>
<h:commandButton value="Submit" action="Response.xhtml"/>
</h:form>
</h:body>
</html>
```

Response.xhtml

```
<html xmlns="http://www.w3.org/1999/xhtml"
      xmlns:h="http://xmlns.jcp.org/jsf/html">
<head>
<title>GetData using Java Bean</title>
<metaname="viewport" content="width=device-width"/>
</head>
<h:body>
<h2><h:outputText value="Hello#{user.fname} #{user.lname}"/></h:outputText></h2>
</h:body>
</html>
```

user.java

```
import java.beans.*;
import java.io.Serializable;
import javax.faces.bean.ManagedBean;
import javax.faces.bean.RequestScoped;
```

```
@ManagedBean
@RequestScoped
public class user implements Serializable
{
    String fname;
    String lname;
    public String getFname()
    {
        return fname;
    }
    public void setFname(String fname)
    {
        this.fname = fname;
    }
    public String getLname()
    {
        return lname;
    }
    public void setLname(String lname)
    {
        this.lname = lname;
    }
}
```

PRACTICAL –11

Aim: Create a web service using Netbeans IDE.

PROGRAM:

webservice1:

Web.xml:

```
<?xml version="1.0" encoding="UTF-8"?>
<web-app xmlns="http://xmlns.jcp.org/xml/ns/javaee"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="http://xmlns.jcp.org/xml/ns/javaee
http://xmlns.jcp.org/xml/ns/javaee/web-app_3_1.xsd"
  version="3.1">
  <session-config>
    <session-timeout>
      30
    </session-timeout>
  </session-config>
</web-app>
```

MyWebService.java:

```
package pack1;
import javax.ws.WebService;
import javax.ws.WebMethod;
import javax.ws.WebParam;
@WebService(serviceName = "MyWebService")
public class MyWebService {
    @WebMethod(operationName = "show")
    public String show(@WebParam(name = "name") String name) {
        //TODO write your implementation code here:
        return "hello"+name;
    }
}
```

Web service1-client:

Client.jsp:

```
<% @page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
```

```

<head>
  <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
  <title>JSP Page</title>
</head>
<body>
  <h1>Hello World!</h1>
  <%-- start web service invocation --%><hr/>
  <%
  try
  {
    pack1.MyWebService_Service service = new pack1.MyWebService_Service();
    pack1.MyWebService port = service.getMyWebServicePort();
    java.lang.String name = "roseindia";
    java.lang.String result = port.show(name);
    out.println("Result = "+result);
  }
  catch (Exception ex){ }
  %>
  <hr/>
</body>
</html>

```

MyWebService.wsdl:

```

```

The screenshot shows a web browser window with the address bar displaying `localhost:8080/wsc/index.jsp`. The browser's tab bar shows several tabs, including "Menu", "close 80 X", "Method X", "localhos X", and "EF Ir". Below the address bar, there are three search or navigation buttons: "Mdnsrf/Accident-d...", "Android Bluetooth...", and "ARDUINO – Firebas...". The main content area of the browser displays a simple addition interface. It consists of two input fields: the first contains the number "23" and the second contains "10". Below these fields is a button labeled "add". The result of the addition, "33", is displayed below the "add" button.

PRACTICAL –12

Aim: To study and implement Hibernate.

PROGRAM:

index.xhtml
